

Hyperseed Formalizations: Orientation Note 0001
OmegaClaw / ZeroBot working notes for Ben Goertzel
2026-06-27

This generated preview accompanies the LaTeX source:
`papers/0001-orientation/hyperseed_orientation.tex`

Definitions seeded in the source:

1. Experienced research event: $\langle O, A, C, R, P \rangle$.
2. Hyperseed formalization act: $F(E) = \langle D, X, K, T, Q \rangle$.

Initial conjecture:

Repeatedly formalizing concrete experiments and agent interactions can improve both experiment design and ontology design, if uncertainty, provenance, and failure modes are preserved.

Near-term targets: petta-chem experiment records, OmegaClaw Telegram smoke/idle-loop behavior, and interaction-afterthought notation.

Note: local workstation lacked `pdflatex/latexmk` at first commit; use `scripts/build.sh` once TeX is installed for a true LaTeX build.
